

## What do we do in Science here at school?

We find out about scientists and we meet scientists

We find out about scientific ideas from the past and present

We make choices about how to find things out

We explain what we've found out in different ways

We find out about the world around us

We experiment and investigate

We are curious and ask questions

We use scientific language and vocabulary

Your Science lessons at Offenham School should help you:

- understand the world around you
- think like a scientist
- know why Science is important
